

### Commercial Validation

Validate your Aquaculture products with scientific accuracy prior to commercial release. Build your data-driven unique value proposition to support and boost competitive advantage, market entry and early adoption.

### Research and Development

Working with clients around the world, Genics team of R&D scientists are developing solutions to improve animal health, mitigate risks associated with disease and improve profitability.

### Breeding Programs

Whether it's genetic diversity management or development of whole genome selection, Genics has the technology and track record in delivering results.

### Disease Investigation

Genics is the gold standard in disease investigation lead by our flagship Shrimp **MultiPath™** and DeepDive Histopathology.

### Database Development

A well planned biological database gives scientists and decision makers the tools to accurately and rapidly analyze and act on data.

### Veterinary

Exceeding best practice, and ensuring our clients receive a true 360° picture of animal health, the Genics team includes qualified aquatic veterinarian experts.

### Recirculation Aquaculture Systems (RAS)

Access global leading expertise in RAS system design and construction customized to deliver on your business model.

### Health Planning

Newly developed science by Genics in health planning is seeing greatly improved results in growth rates and survival of animals. We create bespoke plans depending on your business model.
